

# The Molok® Advantage

**Molok® Deep Collection™** is a new generation waste solution that offers a clean, effective and efficient collection point for a variety of waste types and situations. Due to its **vertical, semi-underground** design, only 40 per cent of the container is visible, while the remaining 60 per cent is underground.

**Compact** - With the semi-underground design the waste compacts under its own weight, meaning the actual capacity of Molok® containers can be 1.5 to 2.5 times greater than same size above ground containers.

**Sanitary** - Lower temperatures underground slow bacterial development, reducing decomposition and odours. Furthermore, the emptying method greatly increases the hygienics of the area.

**Attractive** - Molok® containers fit into almost any setting with customizable framing and the flexibility to surround them with landscaping, pavement or whatever suits your taste. There is also the option of advertising on containers.

**Secure** - The lid closes automatically to keep litter in and wildlife and insects out. Also, the container cannot be tipped over.

**Efficient** - Because odours are not a problem, waste in Molok® containers need only to be collected when full, saving both time and money.

**Space Saving** - Molok® containers take up less space, with a decrease in the amount of land area needed by as much as 92%, allowing for more development on site.

**Easy to Use** - Ease of use for everyone, including children and persons with disabilities.

**Convenient** - Molok® containers can be located just about anywhere on site as pickups are done with a boom instead of a front loader.

**World Wide** - Molok® containers are already located in over 40 countries.

The Molok® Deep Collection™ system offers Crime Prevention Through Environmental Design:

**Round and Low** - There is no need for enclosures and as a result of their aesthetic design, there are no entrapment areas.

**Fire and Blast Resistant** - Because of their vertical, semi-underground design, there is a greatly reduced impact to the surroundings in the event of a fire or explosion.

**Activity Generator** - Because of the flexibility in site placement, Molok® containers can encourage positive activity on a site.

**Graffiti and Vandal Resistant** - Molok® containers do not attract graffiti artists and vandals due to its design and visible placement.

Molok® is a member of the Canadian Green Building Council its products can contribute to LEED certification.
